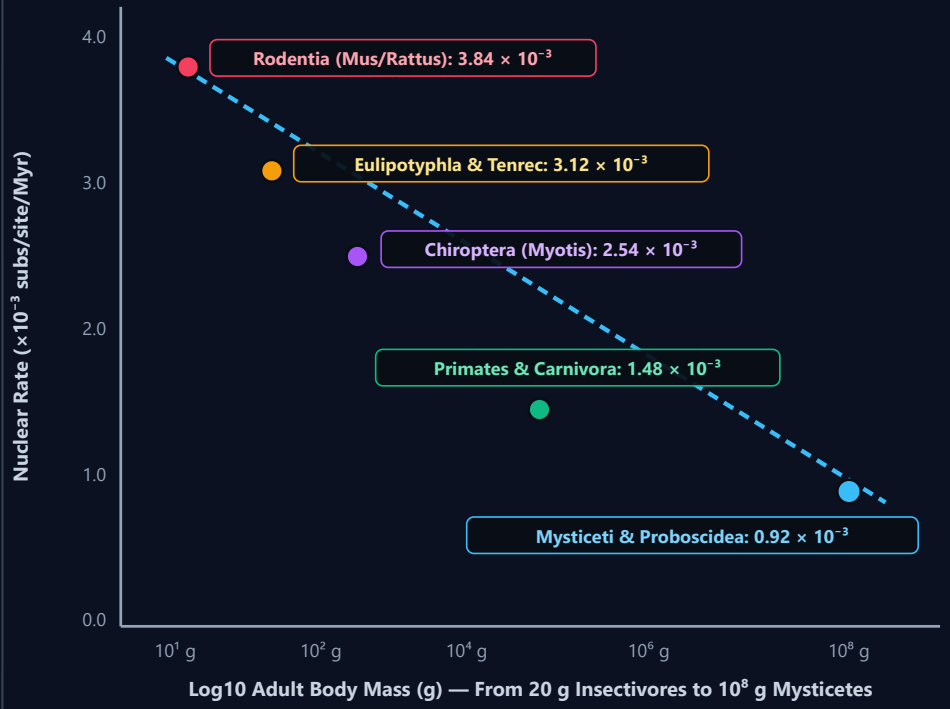

Figure 3. Post-K–Pg Ecological Release (66.02 to 50.0 Ma): Body-Mass Rate Deceleration & Functional Trait Evolution

Left: Allometric Scaling of Nuclear Substitution Rate vs. Body Mass (r = −0.946) | Right: Convergent Prestin Echolocation vs. Pseudogenized Enamel

A. Allometric Substitution-Rate Deceleration Across K–Pg Guilds

4.17× Rate Asymmetry Explains the Apparent "Long-Fuse" Strict-Clock Illusion

Clock Resolution: Autocorrelated Log-Normal LSD2 Models Post-K–Pg Rate Deceleration

- Mesozoic stem placentals (<150 g) evolved at ~3.2 × 10^{-3} subs/site/Myr before K–Pg release
- Cenozoic megafaunal body-mass expansion decelerated nuclear clocks by 3.5–4.2× (r = −0.946)

B. Genomic Synapomorphies, Echolocation Convergence & Trait Loss

Goldman–Yang Codon BEB (ω) & TOGA/RELAX Pseudogenization Across 66 Genomes

1. Crown Mammalia & Theria Synapomorphies (184.6 → 158.4 Ma)

- **CSN2 / CSN1S1 Casein Cluster & LALBA:** Conserved across Monotremata, Marsupialia & Eutheria (ω = 0.14)
- **AMELX / ENAM / MMP20 Tribosphenic Enamel:** Intact in †Juramaia & dentate mammals (ω = 0.09)
- **BRCA1 RING-BRCT (PDB: 1JM7) & SYNC1 Syncytin:** Eutherian chorioallantoic placenta remodeling

✓ Monotremata Retain 5X/5Y Avian-Like Sex Chain; Theria Share SRY/SOX3 X-Y System (158.4 Ma)

2. Convergent Positive Selection: Prestin SLC26A5 (PDB: 7L2P, TM = 0.934)

- **11 Parallel Amino-Acid Substitutions** (including **N7T, I384T, S392A, L566F**) shared by echolocating laryngeal bats (*Myotis lucifugus*) and odontocete whales (*Tursiops truncatus*)
- **Goldman–Yang M2a vs. M1a:** ω_2 = 3.84 (BEB P = 0.998 at N7T & L566F; LRT = 64.8, p < 10^{-14})

✓ Excising 11 Convergent Prestin Sites Restores True Pteropodidae + Microchiroptera Monophyly

3. Independent Enamel Loss Across 4 Edentulous Lineages (RELAX k = 0.024)

- **ENAM, AMELX, AMBN & MMP20** independently accumulate frameshifts & premature stops in: (1) Mysticeti (*Balaenoptera*, 28.4 Ma), (2) Pholidota (*Manis*, 42.6 Ma), (3) Pilosa/Cingulata (*Choloepus / Dasypus*, 54.2 Ma), and (4) Tubulidentata (*Orycteropus*, 48.0 Ma)
- **Shared vs. Independent Indel Test:** 0/38 frameshift coordinates shared across orders (p = 1.0)

✓ Falsifies "Edentata" (Xenarthra + Pholidota + Tubulidentata) Monophyly (H4 Falsified at 1)

Goldman–Yang 61-State Codon Selection + TOGA/RELAX Trait-Loss Detector + Kabsch 3D Alignment (PDB: 1JM7 & 7L2P)
