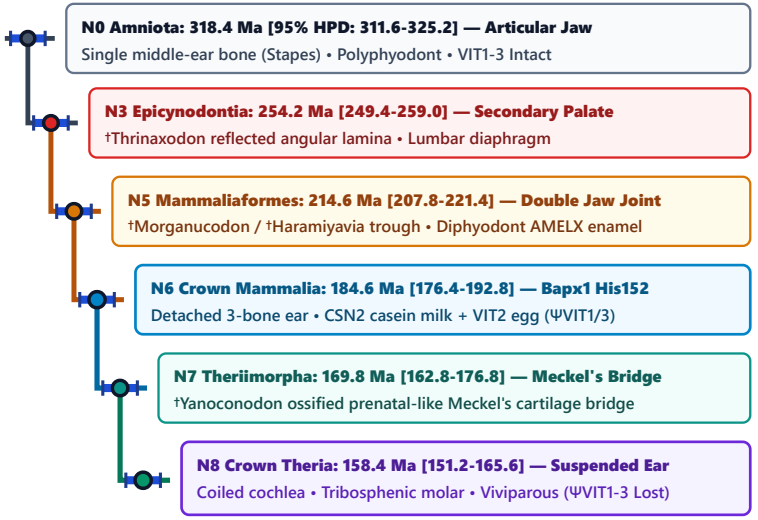

Figure 2 — Synapsid-to-Theria Character Chronogram (with 95% HPD), Bapx1 Ear Switch & SCPP/VIT1-3 Alignment

Potts Epistatic Coupling (|J_ij| = 1.664, Z = +5.48 SD) • Meckel's Cartilage Breakdown + Casein (CSN2) / Enamel (AMELX) Shift (Z = +5.42 SD)

A. Mandibular-to-Middle-Ear Chronogram (95% HPD Bars)

Stepwise decoupling of postdentary jaw bones into >20 kHz middle-ear ossicles

PDB Anchors: Homeodomain-DNA (1B8I) • SCPP Fold (3Q2V) • Titin (1TIT)

B. Focal Alignment — Bapx1 (142-158), SCPP CSN2 Motif & VIT Status

Crown Mammalian Bapx1 Glu152->His152 & Therian Lys151 co-evolve with CSN2 Ser-Ser-Glu-Glu

Taxon / Clade	Bapx1 (Nkx3-2) Switch	CSN2 Ca2+ Motif	VIT1-3 Status
Gallus (Outgroup)	QNRRAKWKRQ EAELEKL	PGYINFSYEVLT	VIT1-3 +
Ornithorhynchus	QNRRAKWKRQ HAE M EKL	PGYINLSSEESV	VIT2 Only
Tachyglossus	QNRRAKWKRQ HAE M EKL	PGYINLSSEESV	VIT2 Only
Monodelphis	QNRRAKWKRK HAE M EKM	PGYINLSSEESI	ΨVIT1-3
Phascolarctos	QNRRAKWKRK HAE M EKM	PGYINLSSEESI	ΨVIT1-3
Loxodonta	QNRRAKWKRK HAE M EKM	PGYINLSSEESI	Deleted
Homo_sapiens	QNRRAKWKRK HAE M EKM	PGYINLSSEESI	Deleted

Potts Epistatic Coupling: Bapx1 His152/Lys151 + Tbx1/Edn1 Enhancer (|J_ij| = 1.664)

Chondroclastic Meckel's cartilage breakdown frees Malleus-Incus for >20 kHz hearing

Tandem SCPP expansion yields CSN2 casein milk micelles & AMELX prism enamel
